## Year 5 Position and Direction

## Translate / Translation

A shape is translated when it is moved without rotating or resizing.

Every point of the shape moves the same distance in the same direction.

## Vertex / Vertices

The corner of a shape is called a vertex.
The plural is vertices. A triangle has 3 vertices.
vertex

## Axis / Axes

A coordinate grid has axes. ${ }^{y}$
The x axis is horizontal.
The $y$ axis is vertical.

left

right

## Reflect / Reflection

A shape is reflected about a line when it is flipped over a mirror line.

Every point of the shape is the same distance from the mirror line as the same point on the reflected shape.

## Coordinates

Coordinates mark the location of a point on a coordinate grid.
The coordinates are written in brackets in the format $(x, y) 2$ where $x$ is how far along and $y$ is how far up.
